Structural change in Brazil and in Minas Gerais between 2008 and 2019: an input-output analysis

Authors: Carla Aguilar (Fundação João Pinheiro), Lúcio Barbosa (Fundação João Pinheiro), Maria Aparecida Salles (Fundação João Pinheiro), Vicente Toledo (CEDEPLAR/UFMG).

Financial support: Fundação de Amparo à Pesquisa do Estado de Minas Gerais (FAPEMIG).

1 Introduction

- The goal of this research is to analyse the driving forces behind the deindustrialization in Brazil and Minas Gerais from 2008 to 2019.
- Brazilian and Minas Gerais economies:
 - Intermediate stage of development;
 - Exports concentrated in natural resources;
 - Deindustrialization began in 1980 in Brazil and deepened from 2009 on.
- Methodology: structural decomposition of the value added; dataset from IBGE and FJP.

2 Literature review

- Structural change and economic growth.
- Driving forces underlying structural change:
 - Supply-side: innovation.
 - Demand-side: consumption preferences.
- Deindustrialization (Palma, 2019):
 - Growing use of services by manufacturing;
 - New international division of labor, including outsourcing;
 - Rapid growth of productivity in the sector;
 - Shift in the ideological paradigm.

2 Literature review

- Why the manufacturing sector? Due to dynamic increasing returns to scale, technological externalities, and linkage effects.
- Factors that can lead structural change to the right direction (Rodrik et al., 2016).
 - Exports not concentraded in natural resources;
 - A competitive real exchange rate;
 - Flexible labour markets;
 - Industrial policy.
- Premature deindustrialization in Brazil
 - More pronounced in the Southeast.

3 The Economy of Minas Gerais and Brazil: 2008-2019

Main differences:

- Coffee (MG) vs. soybeans (BRA);
- Mining (MG) vs. mining and oil and gas extraction (BRA);
- Iron and steel mills (MG) vs. coke and petroleum refining, and the production of chemicals (BRA);
- Financial and insurance services have a larger share in Brazil.

Table 1: Value Added Percentage by Economic Activity - Minas Gerais and Brazil - 2008/2019 and Percentage Change 2019/2008 (%) – constant prices¹

| Xalaa Addad | Minas Ge | rais | Braz | il | Minas Gerais | Brazil |
|---|----------|-------|-------|-------|-------------------|---------------------------------|
| value Added | 2008 | 2019 | 2008 | 2019 | Percentage change | e ² 2019/2008 (p.p.) |
| Agriculture, forestry, farming and fishing | 7,3 | 4,6 | 4,1 | 4,9 | -2,7 | 0,8 |
| Agriculture and forestry | 4,6 | 3,3 | 2,7 | 3,5 | -1,4 | 0,8 |

Source: FJP and IBGE.

¹ The deflation method used was the double deflation method, as presented in the following section.

² The differences between the percentage change and the actual numbers are due to rounding.

4 Methodology

• Structural decompositon analysis:

$$\begin{split} \Delta v &= \left(\frac{1}{2}\right) (\Delta \widehat{va}) (L^1 f^1 + L^0 f^0) + \left(\frac{1}{2}\right) (\widehat{va}^0 \Delta L f^1 + \widehat{va}^1 \Delta L f^0) \\ &+ \left(\frac{1}{2}\right) (\widehat{va}^0 L^0 + \widehat{va}^1 L^1) (\Delta f) \end{split}$$

- The first term on the right side of equation represents the variation in the valueadded coefficient.
- The second term indicates the change in value added due to technological changes.
- The third term reflects the effect of changes in final demand on value added.

Resource based industries:

Brazil

- Change in value added: positive.
- Main driver: international exports.

Minas Gerais

- Change in value added :negative.
- Main drivers: efficiency losses (supply shocks).

Manufacturing sector: the value added decreased between 2008 and 2019 in both Brazil and Minas Gerais.

- The changes attributed to efficiency and technology were negative.
- The main positive influence came from household consumption.

Brazil

Change in value added negative:

- Food and Beverage: efficiency loss.
- Machinery and equipment: investments decline.
- Computer and eletronic: efficiency gains.
- Iron and stell: eficiency loss.

Change in value added positive:

- Biofuels: efficiency gains.
- Pharmeceutical products: interlinkages rise and household consumption rise, but efficiency loss.

Minas Gerais

Change in value added negative:

- Food and Beverage: efficiency loss.
- Iron and steel: inter-regional exports decline, but efficiency gains.
- Computer and eletronic: efficiency loss.

Change in value added positive:

- Machinery and equipment: interlinkages rise.
- Biofuels: inter-regional exports rise and efficienct gains.
- Pharmeceutical products: efficiency gains and interregional exports rise.

Utilities services and construction:

Brazil

Utilities services

- Change in value added positive.
- Main driver: household consumption.

Construction

- Change in value added positive.
- Main driver: efficiency gains.

Minas Gerais Utilities services

- Change in value added negative.
- Main driver: efficiency loss.

Construction

- Change in value added positive.
- Main driver: investments.

Services: the value added increased driven mainly by changes attributed to household consumption.

Only in Minas Gerais two industries experienced a negative valueadded change (supply shock and household income decline)

6 Concluding remarks

From 2008 to 2019, the deindustrialization process in Brazil and Minas Gerais intensified due to:

- Efficiency loss;
- Weakened sectoral linkages.

Growth share of the service sector due to:

household consumption.

Overall, results for Minas Gerais and Brazil were very similar.

Results
